Bab 8 Kinerja FM

Т

Kinerja Detektor FM

•Di titik D dihasilkan sinyal :

$$X_{D}(t) = \frac{d[S_{FM}(t)]}{dt}$$

dengan turunan parsial

$$X_D(t) = -Vc[2\pi.fc + \beta.2\pi.fm.cos 2\pi fmt].sin(2\pi.fct + \beta.sin 2\pi.fmt)$$

•Detektor selubung akan melewatkan selubungnya saja. Setelah dilewatkan kopling kapasitif yang meredam sinyal DC, maka yang keluar tinggal bagian AC saja:

$$X_F(t) = -Vc.\beta.2\pi fm.cos 2\pi.fmt = -Vc.\Delta f.2\pi.cos 2\pi.fmt; \beta = \Delta f / fm$$

•Sehingga daya sinyal informasi di output demodulator :

So = 0,5
$$(-Vc.2\pi.\Delta f)^2 = 0,5.Vc.^2\Delta f^2.4\pi^2$$

$$\eta_{E}(f) = \eta_{A} |H(f)|^{2} = 4\pi^{2} \cdot f^{2} \cdot \eta_{A}$$

$$No = \int_{-f_{M}}^{f_{M}} \eta_{E}(f) df = \int_{-f_{M}}^{f_{M}} 4\pi^{2} f^{2} \eta_{A} df = \frac{8}{3} \cdot \eta_{A} \cdot \pi^{2} \cdot f_{M}^{3} = \frac{2}{3} \cdot \eta_{A} \cdot 4\pi^{2} \cdot f_{M}^{2} \cdot f_{M}$$

Kinerja Detektor FM

$$\frac{S_o}{N_o} = \frac{3}{2} \left(\frac{\Delta f}{f_M} \right)^2 \frac{Si}{\eta_A . f_M} . P$$

$$P = (\pi/6).(BW_{LPF}/fx)$$

frekuensi cut off fx = 2,1 kHz

Contoh Soal Kinerja FM
